Minutes of Meeting

Boards of Studies

A meeting of Boards of Studies of M.Sc. Agriculture (Soil Science) was held on 13-04-2021 in the Director's Office. The following members were present:

- |                     |               |  |
|---------------------|---------------|--|
| 1. Dr. Aneeta Yadav | - Chairperson |  |
| 2. Dr. Arun Shankar | - Member      |  |
| 3. Dr. Ajay Singh   | - Member      |  |

The following members agreed to review the minutes in Kanpur.

- |                   |                   |  |
|-------------------|-------------------|--|
| 1. Dr. Anil Kumar | - External Member |  |
|-------------------|-------------------|--|

**Agenda:**

**1. Action Taken Report (ATR) on Minutes of Previous Meeting.**

The BOS committee confirmed the minutes of the BOS meeting held on 16-03-2020.

**2. Review of the existing programs and their curricula**

S. No.	Item No.	Existing	Recommendation /Action Taken
1.	a. MSS-101: SOIL PHYSICS	Unit IV: Factors affecting soil temperature was not included.	Unit IV: Factors affecting soil temperature was included in the syllabus
2.	a. MSS- 102: SOIL FERTILITY AND FERTILIZER USE	Unit III: Mechanism of phosphorus solubilization and mobilization by microorganisms was not included.	Unit III: Mechanism of phosphorus solubilization and mobilization by microorganisms included.
	b MSS- 102: SOIL FERTILITY AND FERTILIZER	Unit IV: Sulphur transformations in soil were not included.	Sulphur transformations in soil were included.

	USE		
	c. MSS- 102: SOIL FERTILITY AND FERTILIZER USE	Unit IV: Mechanism of potassium solubilization and mobilization by microorganisms were not included.	Unit IV: Mechanism of potassium solubilization and mobilization by microorganisms were included.
	d. MSS- 102: SOIL FERTILITY AND FERTILIZER USE	Unit V: transformations of micronutrient in soils were not included.  Unit VI: STCR approach; soil quality and soil health: definitions and affecting factors in relation to sustainable agriculture were not included.	Unit V: : transformations of micronutrient in soils were included.  Unit VI: STCR approach; soil quality and soil health: definitions and affecting factors in relation to sustainable agriculture were included.
3.	a. MSS- 103: SOIL CHEMISTRY	Unit V: Chemistry of acid soils; active and potential acidity; lime potential, chemistry of acid soils; sub-soil acidity were covered in the syllabus.	Unit V: Chemistry of acid soils; active and potential acidity; lime potential, chemistry of acid soils; sub-soil acidity were removed from the syllabus as these topics are covered in MSS 203: Management of problematic soils.
	b. MSS- 103: SOIL CHEMISTRY	Unit VI exists in syllabus.	Unit VI was removed as it is being covered in in MSS 203: Management of problematic soils.
4.	a. MSS- 104: SOIL MICROBIOL OGY	Unit I: Survival strategies, Microbial metabolism, Soil Food Webs are not included in the syllabus.	Survival strategies, Microbial metabolism, Soil Food Webs are included in the syllabus.
	b. MSS- 104: SOIL MICROBIOL OGY	Unit II: Agricultural applications of soil microorganisms are not included.	Agricultural applications of soil microorganisms are included.
5.	MSS-402: Master's Research (Research Work & Thesis)	Marks are allotted for research credits.	Performance evaluation of student in research credits will be evaluated as satisfactory (S) and unsatisfactory (US) instead in terms of marks. The students getting US should repeat the credits for which found US.

6.	MSS 401	Comprehensive exam was existing	It has been removed from syllabus
----	---------	---------------------------------	-----------------------------------

### 3. Recommendation on New courses/Short term training

S. No.	Item No.	Feedback from Faculty/Student	Recommendation /Action Taken
1	N/A	N/A	N/A

### 4. Consideration of the curricula of the new programs

S. No.	Item No.	Feedback from Faculty/subject experts/Industries	Recommendation /Action Taken
		N/A	N/A

### 5. Review of Teaching Process/Pedagogy

S. No.	Item No.	Existing	Recommendation /Action Taken
1	---	Brain storming based learning.	The faculties are instructed to include the modified Brainstorming based learning and to increase the frequency of presentation based learning to enhance communication skills and leadership quality in students.

**6. Result Analysis: --- Summary of Result Analysis of the students' performance in the semester examination was presented.**

**7. Feedback Analysis: ---** Analysis was performed based on summary of already collected feedback from students and stakeholders regarding programme objective and programme outcome. It was suggested that the course instructors should use include modified brainstorming based learning to teach the students and to increase the frequency of presentation based learning to enhance communication skills and leadership quality in students.

**8. Any other issue with the permission of the Chair: ---N/A**

The meeting concluded with a vote of thanks to the chair.

Date of the Next Meeting: to be decided and conveyed later

  
(Chairman)

***Encl.: Recommended Curricula attached for consideration and approval.***

CC:

1. Dean
2. Registrar Office

**RAMA UNIVERSITY UTTAR PRADESH, KANPUR**  
**Faculty of Agricultural Sciences and Allied Industries**  
**Program: M.Sc. Agriculture (Soil Science)**

**Report on Feedback on Curriculum by Stakeholders (2021-2022)**

- The external experts reviewed the syllabus and approved the removal of most of the topics from Unit V and entire Unit VI of MSS- 103: SOIL CHEMISTRY from the syllabus and addition of various topics in the syllabus.
- The alumni suggested that teachers should use modern methods like modified brain storming and increase the frequency of presentation based learning to enable students to create new ideas to supplement project based learning and enhance communication skills and leadership quality.
- The faculty suggested to evaluate performance of student in research credits as satisfactory (S) and unsatisfactory (US) instead in terms of marks. The students getting US should repeat the credits for which found US.

**Faculty of Agricultural Sciences and Allied Industries**

**Program: M.Sc. Agriculture (Soil Science)**

**Action Taken Report based on Feedback at BoS held on 13-04-2021**

- Most of the topics from Unit V and entire Unit VI of MSS- 103: SOIL CHEMISTRY was removed from the syllabus and suggested topics were added to the syllabus.
- Concerned faculties have been instructed to use modified brain storming and increase the frequency of presentation based learning.
- The concerned BOS has been instructed to evaluate performance of student in research credits as satisfactory (S) and unsatisfactory (US) instead in terms of marks. The students getting US should repeat the credits for which found US.

## MSS-101: SOIL PHYSICS

<b>Course objective:-</b> To express basic information about physical soil properties and processes related to crop growth	<b>L</b>	<b>T</b>	<b>P</b>	<b>CR</b>
	<b>2</b>	<b>0</b>	<b>1</b>	<b>3</b>

### Detail Contents

<b>Unit 1:</b>	<b>35%</b>
<b>Unit 2:</b>	<b>35%</b>
<b>Unit 3:</b>	<b>15%</b>
<b>Unit 4:</b>	<b>15%</b>

### Theory

**Unit-I:** Scope of soil physics and its relation with other branches of soil science; Basic principles of physics applied to soils viz. viscosity, surface tension, capillarity, gaseous diffusion, heat transport, thermodynamic principles; properties of water in relation to porous media; soil as a three phase system. Soil texture, textural classes, mechanical analysis, specific surface. Soil consistence; dispersion and workability of soils; soil compaction and consolidation; soil strength; swelling and shrinkage - basic concepts. Soil structure - genesis, types, characterization and management soil structure; soil aggregation, aggregate stability; soil tilth and soil conditioners, characteristics of good soil tilth; soil crusting - mechanism, factors affecting and evaluation; soil conditioners; puddling, its effect on soil physical properties; clod formation; soil strength and its measurement.

**Unit-II:** Soil water: content and potential, soil water retention, soil-water constants, measurement of soil water content, energy state of soil water, soil water potential, soil moisture characteristic curve; hysteresis, measurement of soil-moisture potential. Water flow in saturated and unsaturated soils, Poiseuille's law, Darcy's law; hydraulic conductivity, permeability and fluidity, hydraulic diffusivity; measurement of hydraulic conductivity in saturated and unsaturated soils. Infiltration; internal drainage and redistribution; evaporation; hydrologic cycle, field water balance; soil-plant-atmosphere continuum.

**Unit-III:** Composition of soil air; renewal of soil air - convective flow and diffusion; measurement of soil aeration; aeration requirement for plant growth; soil air management.

**Unit-IV:** Modes of energy transfer in soils; energy balance; thermal properties of soil; measurement of soil temperature; soil temperature in relation to plant growth; factors affecting soil temperature, soil temperature management.

### **Practical**

- Mechanical analysis by pipette and international methods
- Measurement of Atterberg limits
- Aggregate analysis - dry and wet
- Measurement of soil-water content by different methods
- Measurement of soil-water potential by using tensiometer and gypsum blocks
- Determination of soil-moisture characteristics curve and computation of pore-size distribution
- Determination of hydraulic conductivity under saturated and unsaturated conditions
- Determination of infiltration rate of soil
- Determination of aeration porosity and oxygen diffusion rate
- Soil temperature measurements by different methods • Estimation of water balance components in bare and cropped fields
- Determination of Least Limiting Water Range of a Soil

### **Course Learning Outcomes (CLO)**

Through this course students should successfully:

- Hypothesize the basic concepts of soil physics
- Outline the physical characteristics of soils
- Illustrate the attributes of soil water and its movement
- Evaluate soil air composition, its movement and management
- Assess thermal properties of soils
- describe soil-plant-water relationship

**Mapping of course learning outcomes (CLO) with programme outcomes (PO) and programme specific outcomes (PSO)**

## MSS- 102: SOIL FERTILITY AND FERTILIZER USE

	L	T	P	CR
<b>Course objective:-</b> To inform students about soil fertility, and to recognize the role of fertilizers and manures in supplying plants with nutrients so that high fertilizer use efficiency is achieved.	3	0	1	4

### Detail Contents

<b>Unit 1:</b>	<b>10%</b>
<b>Unit 2:</b>	<b>20%</b>
<b>Unit 3:</b>	<b>15%</b>
<b>Unit 4:</b>	<b>20%</b>
<b>Unit 5:</b>	<b>10%</b>
<b>Unit 6:</b>	<b>25%</b>

### Theory

Unit-I: Historical view and future of soil fertility, Soil fertility and soil productivity; nutrient sources – fertilizers and manures; essential plant nutrients - functions and deficiency symptoms.

Unit-II: Soil and fertilizer nitrogen – sources, forms, immobilization and mineralization, nitrification, denitrification; biological nitrogen fixation - types, mechanism, microorganisms and factors affecting; nitrogenous fertilizers and their fate in soils; management of fertilizer nitrogen in lowland and upland conditions for high fertilizer use efficiency.

Unit-III: Soil and fertilizer phosphorus - forms, immobilization, mineralization, reactions in acid and alkali soils; factors affecting phosphorus availability in soils; phosphatic fertilizers - behavior in soils and management under field conditions. Mechanism of phosphorus solubilization and mobilization by microorganisms.

Unit-IV: Potassium - forms, equilibrium in soils and its agricultural significance; mechanism of potassium fixation; management of potassium fertilizers under field conditions. Sulphur - source, forms, fertilizers and their behavior in soils; Sulphur transformations in soil; calcium and magnesium– factors affecting their availability in soils; management of sulphur, calcium and magnesium fertilizers. Mechanism of potassium solubilization and mobilization by microorganisms.

Unit-V: Micronutrients – critical limits in soils and plants; transformations of micronutrient in soils, factors affecting their availability and correction of their deficiencies in plants; role of chelates in nutrient availability.

Unit-VI: Common soil test methods for fertilizer recommendations; quantity– intensity relationships; soil test crop response correlations and response functions. Fertilizer use efficiency; nutrient requirements of crops and cropping systems in sustainable agriculture and quality of the produce, foliar nutrition of crop plants; blanket fertilizer recommendations – usefulness and limitations; site-specific nutrient management; Fertilizer x water interactions, crop production under fertilizer / water constraints; long-term fertilizer experiments; organic farming: principles, practices and its impact on soil processes; precision farming: concept and practices; plant need based nutrient management; integrated nutrient management. Soil fertility evaluation - biological methods, soil, plant and tissue tests; critical nutrient concentration - concept and determination (graphical and statistical procedures); critical nutrient range; diagnosis recommendation and integrated system (DRIS); STCR approach; soil quality and soil health: definitions and affecting factors in relation to sustainable agriculture.

### **Practical**

- Principles of colorimetry
- Flame-photometry and atomic absorption spectroscopy
- Chemical analysis of soil for total and available nutrients
- Analysis of plants for essential elements

### **Course Learning Outcomes (CLO)**

Through this course students should successfully:

- Discuss soil fertility
- Analyze the role of manures and fertilizers as source of nutrients to plants
- Review nutrients' recycling in agro ecosystem
- Illustrate the critical concentration and forms of soil nutrients
- Explain the methods of soil fertility evaluation and fertilizer recommendation

**Mapping of course learning outcomes (CLO) with programme outcomes (PO) and programme specific outcomes (PSO)**

## MSS- 103: SOIL CHEMISTRY

**Course objective:-** To present the concept of soil chemistry and to acclimate students with current advancements in soil chemistry with regard to utilizing soils as a medium for crop growth.

L	T	P	CR
2	0	1	3

### Detail Contents

<b>Unit 1:</b>	<b>10%</b>
<b>Unit 2:</b>	<b>25%</b>
<b>Unit 3:</b>	<b>25%</b>
<b>Unit 4:</b>	<b>10%</b>
<b>Unit 5:</b>	<b>15%</b>
<b>Unit 6:</b>	<b>15%</b>

### Theory

UNIT-I: Chemical (elemental) composition of the earth's crust and soils. Elements of equilibrium thermodynamics, chemical equilibria, electrochemistry and chemical kinetics.

UNIT-II: Soil colloids: inorganic and organic colloids - origin of charge, concept of point of zero-charge (PZC) and its dependence on variable-charge soil components, surface charge characteristics of soils; diffuse double layer theories of soil colloids, zeta potential, stability, coagulation/flocculation and peptization of soil colloids; electrometric properties of soil colloids; sorption properties of soil colloids; soil organic matter - fractionation of soil organic matter and different fractions, clay-organic interactions.

UNIT-III: Ion exchange processes in soil; cation exchange- theories based on law of mass action (Kerr-Vanselow, Gapon equations, hysteresis, Jenny's concept), adsorption isotherms, donnan-membrane equilibrium concept, clay-membrane electrodes and ionic activity measurement, thermodynamics, statistical mechanics; anion and ligand exchange – innersphere and outer-sphere surface complex formation, fixation of oxyanions, hysteresis in sorption-desorption of oxy-anions and anions, shift of PZC on ligand exchange, AEC, CEC; experimental methods to study ion exchange phenomena and practical implications in plant nutrition.

UNIT-IV: Potassium, phosphate and ammonium fixation in soils covering specific and non-specific sorption; precipitation-dissolution equilibria; step and constant-rate K; management aspects.

UNIT-V: Chemistry and electrochemistry of submerged soils.

### **Practical**

- Preparation of saturation extract
- Determination of CEC and AEC of soils
- Analysis of equilibrium soil solution for pH, EC, Eh by the use of Eh-pH meter and conductivity meter
- Determination of point of zero-charge and associated surface charge characteristics by the serial potentiometric titration method
- Potentiometric and conductometric titration of soil humic and fulvic acids
- Quantity-intensity relationships of potassium in soil
- Extraction of humic substances
- (E4/E6) ratio of soil humic and fulvic acids by visible spectrophotometric studies and the  $\bar{A}$  (E4/E6) values at two pH values
- Adsorption-desorption of phosphate/sulphate by soil using simple adsorption isotherm
- Construction of adsorption envelope of soils by using phosphate/fluoride/sulphate and ascertaining the mechanism of the ligand exchange process involved
- Determination of titratable acidity of an acid soil by BaCl<sub>2</sub>-TEA method
- Determination of lime requirement of an acid soil by buffer method
- Determination of gypsum requirement of an alkali soil

### **Course Learning Outcomes (CLO)**

Through this course students should successfully:

- illustrate the chemical composition of the earth's crust and soils

- review concepts in soil chemistry
- Associate soil chemical processes with nutrient availability.
- discuss mechanisms of fixation of nutrient in soil and its impact on nutrient availability
- assess the phenomena and models of cationic and anionic exchange

**Mapping of course learning outcomes (CLO) with programme outcomes (PO) and programme specific outcomes (PSO)**

## MSS- 104: SOIL MICROBIOLOGY

Course objective:-	L	T	P	CR
To impart knowledge on role of soil microbes in nutrient recycling and to give an overview on microbial ecology-microbial habitats, their interactions and plant-microbe relationship	2	0	1	3

### Detail Contents

Unit 1:	10%
Unit 2:	25%
Unit 3:	25%
Unit 4:	40%

### Theory

**Unit-I:** Soil biota, Soil microbial ecology, types of organisms in different soils; Soil microbial biomass; Survival strategies, Microbial metabolism, Soil Food Webs, Microbial interactions: unculturable soil biota.

**Unit-II:** Microbiology and biochemistry of root - soil interface; phyllosphere, Biofertilizers, soil enzyme activities and importance, Agricultural applications of soil microorganisms.

**Unit-III:** Microbial transformations of nitrogen, phosphorus, sulphur, iron and manganese in soil. Biochemical composition and biodegradation of soil organic matter and crop residues; energy flow in the plant-microorganisms system; soil enzymes involved in organic matter break down and plant nutrient transformations.

**Unit-IV:** Soil genomics and bioprospecting; soil sickness due to biological agents; xenobiotics; antibiotic production in soil; Biodegradation of pesticides, Organic wastes and their use for production of biogas and manures: Biotic factors in soil development.

### Practical

- Determination of soil microbial population
- Determination of Soil microbial biomass
- Determination of Decomposition studies in soil
- Determination of Soil enzymes

- Measurement of important soil microbial processes such as ammonification, nitrification, N<sub>2</sub> fixation, S oxidation, P solubilization and mineralization of other micro-nutrients
- Study of rhizosphere effect.
- Enumeration of nitrifiers by most probable number method
- Determination of free-living N<sub>2</sub> fixation in soil

### Course Learning Outcomes (CLO)

Through this course students should successfully:

- describe beneficial effects of soil microorganisms on soil health and balancing the soil ecosystem
- illustrate transformation of nutrients and humic substances by soil microorganisms
- review plant-microbe interactions

### Mapping of course learning outcomes (CLO) with programme outcomes (PO) and programme specific outcomes (PSO)

PO & PSO \ CLO	PO <sub>1</sub>	PO <sub>2</sub>	PO <sub>3</sub>	PO <sub>4</sub>	PO <sub>5</sub>	PSO <sub>1</sub>	PSO <sub>2</sub>	PSO <sub>3</sub>	PSO <sub>4</sub>

## MSS-201: SOIL MINERALOGY, GENESIS AND SURVEY

Course objective:-	L	T	P	CR
To familiarize students with genesis of soil and structure of associated minerals and impart knowledge about conduction of soil survey and interpretation of associated data for effective land use planning.	2	0	1	3

### Detail Contents

Unit 1:	20%
Unit 2:	20%
Unit 3:	20%
Unit 4:	20%
Unit 5:	20%

### Theory

**Unit-I:** Fundamentals of crystallography, space lattice, coordination theory, isomorphism and polymorphism. Classification, structure, chemical composition and properties of clay minerals; genesis and transformation of crystalline and non-crystalline clay minerals; identification techniques; amorphous soil constituents and other non-crystalline silicate minerals and their identification; clay minerals in Indian soils.

**Unit-II:** Historical developments in Pedology; Factors of soil formation, soil formation models; soil forming processes; weathering of rocks and mineral transformations; soil profile; weathering sequences of minerals with special reference to Indian soils.

**Unit-III:** Concept of soil individual; soil classification systems – historical developments and modern systems of soil classification with special emphasis on soil taxonomy; soil classification, soil mineralogy and soil maps – usefulness.

**Unit-IV:** Soil survey and its types; soil survey techniques - conventional and modern; soil series – characterization and procedure for establishing soil series; benchmark soils and soil correlations; soil survey interpretations; soil mapping, thematic soil maps, cartography, mapping units, techniques for generation of soil maps; application of remote sensing and GIS in soil survey and mapping

**Unit-V:** Landform – soil relationship; major soil groups of India with special reference to respective states; land capability classification and land irrigability classification; land evaluation and land use type (LUT) – concept and application; approaches for managing soils and landscapes in the framework of agro-ecosystem.

### **Practical**

- Identification and quantification of minerals in soil fractions
- Morphological properties of soil profile in different landforms
- Classification of soils using soil taxonomy
- Calculation of weathering indices and its application in soil formation
- Grouping soils using available data base in terms of soil quality
- Aerial photo and satellite data interpretation for soil and land use
- Cartographic techniques for preparation of base maps and thematic maps, processing of field sheets, compilation and obstruction of maps in different scales
- Land use planning exercises using conventional and RS tools

### **Course Learning Outcomes (CLO)**

Through this course students should be able to:

- Illustrate factors and processes of soil formation.
- Assess structure and genesis of clay minerals.
- Review properties of clay minerals.
- Discuss soil classification and its importance.
- Explain soil survey and soil survey reports
- Describe major soil groups of India

**Mapping of course learning outcomes (CLO) with programme outcomes (PO) and programme specific outcomes (PSO)**

PO & PSO \ CLO	PO <sub>1</sub>	PO <sub>2</sub>	PO <sub>3</sub>	PO <sub>4</sub>	PO <sub>5</sub>	PSO <sub>1</sub>	PSO <sub>2</sub>	PSO <sub>3</sub>	PSO <sub>4</sub>

## MSS-202: SOIL WATER AND AIR POLLUTION

L	T	P	CR
2	0	1	3

**Course objective:-** Making the students aware of the soil, water and air pollution problems involved with the use of soil for crop production.

### Detail Contents

Unit 1:	20%
Unit 2:	20%
Unit 3:	20%
Unit 4:	20%
Unit 5:	20%

### Theory

Unit-I: Soil and water resources of India; Soil, water and air pollution problems associated with agriculture, nature and extent. Nature and sources of pollutants – agricultural, industrial, urban wastes, fertilizers and pesticides, acid rains, oil spills etc.; air, water and soil pollutants - their CPC standards; Laws and legislation for soil and water pollution, permissible limits of pollutants in soil and water; air quality index; effect of soil, water and air pollutants on plants, animals and human beings; status of pollution in India.

Unit-II: Sewage and industrial effluents – their composition and effect on soil properties/health, and plant growth and human beings; soil as sink for waste disposal.

Unit-III: Pesticides – their classification, behavior in soil and effect on soil microorganisms. Toxic elements – their sources, behavior in soils, effect on nutrients availability, effect on plant and human health.

Unit-IV: Pollution of water resources due to leaching of nutrients and pesticides from soil; emission of greenhouse gases – carbon dioxide, methane and nitrous oxide.

Unit-V: Remediation/amelioration of contaminated soil and water; remote sensing applications in monitoring and management of soil and water pollution.

### Practical

- Sampling of sewage waters, sewage sludge, solid/liquid industrial wastes, polluted soils and plants
- Estimation of dissolved and suspended solids, chemical oxygen demand (COD), biological demand (BOD), nitrate and ammoniacal nitrogen and phosphorus, heavy metal content in effluents
- Heavy metals in contaminated soils and plants
- Management of contaminants in soil and plants to safeguard food safety
- Air sampling and determination of particulate matter and oxides of sulphur
- Visit to various industrial sites to study the impact of pollutants on soil and Plants

### Course Learning Outcomes (CLO)

Through this course students should successfully

- identify soil, water and air pollution problems
- interpret criteria of soil, water and air quality data
- assess transformations of pollutants

### Mapping of course learning outcomes (CLO) with programme outcomes (PO) and programme specific outcomes (PSO)

PO & PSO \ CLO	PO <sub>1</sub>	PO <sub>2</sub>	PO <sub>3</sub>	PO <sub>4</sub>	PO <sub>5</sub>	PSO <sub>1</sub>	PSO <sub>2</sub>	PSO <sub>3</sub>	PSO <sub>4</sub>

## MSS-203: MANAGEMENT OF PROBLEMATIC SOILS

Course objective:-	L	T	P	CR
To impart concepts of problematic soils, brackish water, and their management with respect to crop production.	2	0	1	3

### Detail Contents

Unit 1:	15%
Unit 2:	35%
Unit 3:	25%
Unit 4:	25%

### Theory

UNIT-I: Area and distribution of problem soils – acidic, saline, sodic and physically degraded soils; origin and basic concept of problematic soils, and factors responsible.

Unit-II: Morphological features of saline, sodic and saline-sodic soils; characterization of salt-affected soils - soluble salts, ESP, pH; physical, chemical and microbiological properties. Management of salt-affected soils; salt tolerance of crops - mechanism and ratings; monitoring of soil salinity in the field; management principles for sandy, clayey, red lateritic and dry land soils.

Unit-III: Acid soils - nature of soil acidity, sources of soil acidity; effect on plant growth, lime requirement of acid soils; management of acid soils; biological sickness of soils and its management.

Unit-IV: Quality of irrigation water; management of brackish water for irrigation; salt balance under irrigation; characterization of brackish waters, area and extent; relationship in water use and quality. Agronomic practices in relation to problematic soils; cropping pattern for utilizing poor quality ground waters.

### Practical

- Characterization of acid, acid sulfate, salt-affected and calcareous soils

- Determination of cations ( $\text{Na}^+$ ,  $\text{K}^+$ ,  $\text{Ca}^{++}$  and  $\text{Mg}^{++}$ ) in ground water and soil samples
- Determination of anions ( $\text{Cl}^-$ ,  $\text{SO}_4^{--}$ ,  $\text{CO}_3^{--}$  and  $\text{HCO}_3^-$ ) in ground waters and soil samples
- Lime and gypsum requirements of acid and sodic soils

### Course learning outcomes (CLO)

Though this course the students should successfully:

- Examine soil quality and health
- identify distribution of Waste land and problem soils in India
- review reclamation and management of soils with physical, chemical and biological constraints
- Illustrate standards of quality of irrigation water and utilization of brackish water in agriculture.
- explain bio remediation of soils through Multipurpose tree species

### Mapping of course learning outcomes (CLO) with programme outcomes (PO) and programme specific outcomes (PSO)

PO & PSO	PO <sub>1</sub>	PO <sub>2</sub>	PO <sub>3</sub>	PO <sub>4</sub>	PO <sub>5</sub>	PSO <sub>1</sub>	PSO <sub>2</sub>	PSO <sub>3</sub>	PSO <sub>4</sub>

## MSS-204: Crop Physiology

	L	T	P	CR
<b>Course objective:-</b>	2	0	1	3

To impart knowledge about crop growth, development and interaction with environment with respect to physiological processes.

### Detail Contents

<b>Unit 1:</b>	<b>10%</b>
<b>Unit 2:</b>	<b>15%</b>
<b>Unit 3:</b>	<b>15%</b>
<b>Unit 4:</b>	<b>15%</b>
<b>Unit 5:</b>	<b>15%</b>
<b>Unit 6:</b>	<b>15%</b>
<b>Unit 7:</b>	<b>15%</b>

### Theory

#### Unit I

Cell organelles and their physiological functions, structure and physiological functions of cell wall, cell inclusions; cell membrane structure and functions.

#### Unit II

Soil and plant water relations, water and its role in plants, properties and functions of water in the cell water relations-cell water terminology, water potential of plant cells. Mechanism of water uptake by roots-transport in roots, aquaporins, movement of water in plants – Mycorrhizal association on water uptake. Water loss from plants-Energy balance-Solar energy input-energy dissipation at crop canopy level- evapotranspiration, transpiration –Driving force for transpiration, plant factors influencing transpiration rate.

#### Unit III

Stomata structure and function – mechanism of stomatal movement, antitranspirants.

Physiology of water stress in plants: Influence of water stress at cell, organ, plant and canopy levels. Indices for assessment of drought resistance. The role of mineral nutrients in plant metabolism: Essential elements, classification based on function of elements in plants.

#### Unit IV

Uptake of mineral elements in plants –Mechanisms of uptake-translocation of minerals in plants. Physiological and metabolic functions of mineral elements, critical levels, deficiency symptoms, nutrient deficiency and toxicity. Foliar nutrition.

#### Unit V

Photosynthesis and its importance in bio productivity. Photochemical process, photochemical reactions, CO<sub>2</sub> reduction in Calvin cycle, supplementary pathway of C fixation in C<sub>4</sub> and CAM plants and its significance. Photorespiration and its relevance. Photosynthesis as a diffusive process, effect of environmental factors on photosynthetic rates. Synthesis of sucrose, starch, oligo and polysaccharides (composition of cell wall). Translocation of photosynthates and its importance in sink growth. Mitochondrial respiration, growth and maintenance respiration, cyanide resistant respiration and its significance.

#### Unit VI

Nitrogen metabolism: Inorganic nitrogen species (N<sub>2</sub>, NO<sub>3</sub> and NH<sub>3</sub>) and their reduction to amino acids, protein synthesis and nucleic acids. Lipid metabolism- Storage, protective and structural lipids. Biosynthesis of fatty acids, diacyl and triacyl glycerol, fatty acids of storage lipids. Secondary metabolites and their significance in plant defense mechanism. Growth and differentiation.

#### Unit VII

Hormonal regulation of growth and differentiation, plant growth hormones and their physiological role, synthetic growth regulators, growth retardants, apical dominance, senescence, fruit growth, abscission. Photomorphogenesis: Photoreceptors, phytochrome, cryptochrome. Physiology of flowering: Photoperiodism and vernalization.

#### Practicals

- Estimation of plant water status: Relative water content, water potential estimation by pressure chamber/ psychrometer
- Growth parameters: Growth parameters measurement
- Photosynthesis and related parameters: Estimation of chlorophyll/ carotenoid content, separation of photosynthetic pigment using paper chromatography, photosynthesis measurements by IRGA, respiration rate measurement.
- Amino Acid and proteins: Estimation of total free amino acids, estimation of proteins by Lowry/ Bradford method.

- Nitrogen metabolism: *In vivo* nitrate reductase activity assay, nitrogenase activity assay by gas chromatography.

### Course Learning Outcomes (CLO)

Through this course students should successfully:

- distinguish physiological processes involved in the formation of seedlings
- review the factors regulating growth and developmental processes of crop plants
- evaluate strategies used by plants with respect to nutrient uptake and utilization
- Illustrate the significance of assimilate translocation and partitioning.
- Associate crop-environment interaction and crop growth, yield

### Mapping of course learning outcomes (CLO) with programme outcomes (PO) and programme specific outcomes (PSO)

PO & PSO	PO <sub>1</sub>	PO <sub>2</sub>	PO <sub>3</sub>	PO <sub>4</sub>	PO <sub>5</sub>	PSO <sub>1</sub>	PSO <sub>2</sub>	PSO <sub>3</sub>	PSO <sub>4</sub>

**PGS 301 HISTORY OF AGRICULTURE**

**L T P CR**

**Course objective:-**

**1 0 0 1**

**To inform students about history of agriculture and developments in agriculture in pre and post independence era.**

**Detail Contents**

**Unit 1: 25%**

**Unit 2: 25%**

**Unit 3: 25%**

**Unit 4: 25%**

**UNIT-I**

Agriculture in ancient India: archaeological findings and literature.

**UNIT-II**

Ancient literature on: farm implements, forecast of weather and rains, types of lands, manure, irrigation, seed and sowing, pests and their management, horticulture and arboriculture, cattle management etc.

**UNIT-III**

Agricultural research, education and extension in pre-and post-independent India. Green revolution, success, associated problems, lessons learnt.

**UNIT-IV**

Challenges to Indian agriculture: future needs and capabilities, environmental problems, international agriculture and partnership. Emerging scenario and expectations.

**Course Learning Outcomes (CLO)**

Through this course students should successfully:

- describe relevance of agricultural heritage in current times
- review developments in agriculture with time

**Mapping of course learning outcomes (CLO) with programme outcomes (PO) and programme specific outcomes (PSO)**

PO & PSO \ CLO	PO <sub>1</sub>	PO <sub>2</sub>	PO <sub>3</sub>	PO <sub>4</sub>	PO <sub>5</sub>	PSO <sub>1</sub>	PSO <sub>2</sub>	PSO <sub>3</sub>	PSO <sub>4</sub>

## MSS-302: BASIC STATISTICAL METHODS IN AGRICULTURE

<b>Course objective:-</b> To impart knowledge about basic statistics and its applications to research.	<b>L</b>	<b>T</b>	<b>P</b>	<b>CR</b>
	<b>2</b>	<b>0</b>	<b>1</b>	<b>3</b>

### Detail Contents

**Unit 1:** 25%

**Unit 2:** 25%

**Unit 3:** 25%

**Unit 4:** 25%

### Theory

#### UNIT I

Classification, tabulation and graphical representation of data. Levels of measurement. Descriptive statistics. Theory of probability. Random variable and mathematical expectation. Probability distributions: Binomial, Poisson, Normal distributions and their applications. Concept of sampling distribution: t,  $\chi^2$  and F distributions. Tests of significance based on normal, t,  $\chi^2$  and F distributions. Non-parametric tests.

#### UNIT II

Correlation and regression: Correlation, partial correlation coefficient, multiple correlation coefficient, rank correlation, simple and multiple linear regression model. Estimation of parameters. Coefficient of determination. Introduction to multivariate analytical tools: Principal component analysis and cluster analysis.

#### UNIT III

Planning of an experiment and basic principles of design of experiments. Analysis of variance. Completely randomized design (CRD), Randomized complete block design (RCBD), Latin square design (LSD). Randomization procedure, analysis and interpretation of results. Concept of factorial experiments.

#### UNIT IV

Planning of sample surveys. Sampling vs complete enumeration, Simple random sampling, Stratified sampling.

### Practical

- Exercises on probability distributions.
- Correlation and regression analysis.
- Large sample tests, testing of hypothesis based on  $\chi^2$ , t and F.
- Exercises on non-parametric tests.

- Principal component analysis and cluster analysis.
- Analysis of data obtained from CRD, RBD, LSD.
- Analysis of data of factorial experiments.
- Selection of a random sample, estimation using simple random sampling.
- Exercises on stratified sampling.

### Course learning outcomes (CLO)

Through this course students should successfully:

- Illustrate the basics of statistical theory used in agriculture.
- Compute and apply measures of location and measures of dispersion of data.
- Explain the different hypothesis testing methods.
- Apply the statistical techniques in agricultural experimental designs.

### Mapping of course learning outcomes (CLO) with programme outcomes (PO) and programme specific outcomes (PSO)

## MSS-303: LIBRARY AND INFORMATION SERVICES

Course objective:	L	T	P	CR
To teach students the concepts and principles of library and information services	0	0	1	1

### Detail Contents

Unit 1: 100%

### Unit I:

#### Practical

- Introduction to library and its services
- Role of libraries in education, research and technology transfer
- Classification systems and organization of library
- Sources of information- Primary Sources, Secondary Sources and Tertiary Sources
- Intricacies of abstracting and indexing services (Science Citation Index, Biological Abstracts, Chemical Abstracts, CABI Abstracts, etc.)
- Tracing information from reference sources; Literature survey
- Citation techniques/Preparation of bibliography
- Use of CD-ROM Databases, Online Public Access Catalogue and other computerized library services
- Use of Internet including search engines and its resources; e-resources access methods

#### Course learning outcomes (CLO)

Through this course students should successfully:

- Trace information from libraries efficiently.
- Appraise the information and knowledge resources

Illustrate on modern tools like internet, OPAC, search engines etc for information searching.

**Mapping of course learning outcomes (CLO) with programme outcomes (PO) and programme specific outcomes (PSO)**

## MSS- 401: Comprehensive Exam and Masters Research Work and Thesis/Project

L	T	P	CR
0	0	20	20

### Course Objective:

- To evaluate the knowledge gained by student
- To enable the student to gain deeper knowledge, understanding, capabilities and attitudes in the context of the programme of study.

### Course learning outcomes (CLO)

Through this course students should be able to:

- apply the theoretical information achieved during the programme
- collect and interpret data
- assess the analytical methods during the programme
- solve problems in soil science and plant nutrition

**Mapping of course learning outcomes (CLO) with programme outcomes (PO) and programme specific outcomes (PSO)**
